A: The answer is: `res.status = 200` That returns the HTTP status code 200, which is defined as an "OK" status. Since 200 is an "OK" status, you can call a response handler function. Alternatively, if you just want to see the HTTP headers that Firefox sent, you can just use: `print res.headers` which will print out a message like: `{'Cache-Control': 'max-age=0', 'Content-Type': 'text/html; charset=utf-8', 'Date': 'Wed, 06 Mar 2016 20:43:54 GMT', 'Last-Modified': 'Tue, 30 Dec 2015 20:55:14 GMT', 'P3P': 'CP="This is not a P3P policy! See ""'} If you want to see how the response handler function it, you can try this: import cgi import cgitb; cgitb.enable() def handle_file(req, res): import pprint; pprint.pprint(req.headers); res.status = 200; res.set_header('Content-Type', 'text/plain'); res.set_header('Content-Length', str(len(res.get_data()))); res.end(res.get_data()); return app = Flask(__name__); app.add_url_rule('/get_response', 'get_response', handler = handle_file) You can test it by adding a request handler to the URL /get_response: app.run(port=int(os.environ.get('PORT', 8080))) if __name__ == '__main__': print 'Running on port', app.config['PORT']; geturl = ""; format(app.config['PORT 2d92ce491b`
