This textbook is an expanded version of Elementary Linear Algebra, ninth edition by Howard Anton. The first ten chapters of this book are identical. The first chapter covers the basics. It describes three methods that make it possible to make some statements about symmetry in space. The second chapter describes how the Euler and Lagrange equations are used to make some statements about symmetry without resorting to equations. In the third chapter, some concepts of symmetry are introduced, for example, vectors whose coordinates are not symmetrical on both sides. The fourth chapter contains a set of axioms. fffad4f19a
