As Photoshop makes its debut on the Apple Watch, it's a great time to see what Photoshop can really do on the wrist. Although it may look a bit odd to use Photoshop on the Apple Watch, it's not too hard to navigate the menus and keyboard commands to get things done. Here are some of my favorite ways to use Photoshop on the Apple Watch for both pros and amateurs. Manipulate art and models Portrait or Landscape? These are some of the first images I created using Photoshop on the Apple Watch for some finished portraits. Professionally transforming I will admit that I do not know how to make these images look more realistic. I guess by using color, shadows, and such that hopefully make them look more real. This next is a simple case of using layers to edit a model in the middle of a photo shoot, using a model named "Sabrina" from the website Doodles.com. Using the iPhone's camera The layer system means there's virtually no limit to what you can do with Photoshop. It's easy to create a nearly limitless number of layers, then manipulate your image using their transparency settings. You can really do anything with layers and Photoshop. Layer-based (Photoshop) editing mode Using the Apple Watch's touchscreen, it's easy to access layers with a click or two. Using the watch's intuitive interface There's really not much different between the touch screen and the display on the Apple Watch, making it easy to navigate the various editing options. Using the iPhone as a light source This is a simple daytime portrait with a little bit of help from my iPhone as a light source. It works great to help me see what I'm doing better. You can really open up Photoshop for just about anything you could ever want to do. It's a great tool for both pros and amateurs. The most basic editing uses This is one of the most basic uses of layers; the use of the "eraser" to remove unwanted areas or objects from the image. Here, I needed to remove my red jacket and yellow camera bag. Reducing distractions Most of

Q: How to change for loop value in R How do I change the value of a for loop in R? Here is my loop: for(i in 1:9){ n Q: Ionic angular: AngularJS does not load at all using ionic serve --v2 I made a cordova app with Ionic, then I built a cordova project with "ionic cordova build android --release" and everything is ok, then when I tried to debug using ionic serve, I got this error: When I builded the ionic app, there are some http server on "ionic serve --v2", then the problem occurred. A: The build process automatically create a folder called www inside the ionic folder which contains all the built app assets. When you do ionic serve, you don't point to your actual app but to the www folder of the builded app, thus the HTTP server which was automatically installed by ionic serve isn't launched. This is a problem in windows builds since there is no httpd.exe. To make this work, the simplest solution is just to do ionic serve --prod 2015 in Ireland The following lists events in the year 2015 in Ireland. Incumbents President: Michael D. ROME (Reuters) - Italian authorities said on Wednesday there had been an incident at an Italian railway station in which a small train was damaged by a bomb, but they were not aware of any deaths and no arrests had been made. It was the second attack in a few days in the north of Italy. On Thursday, police said no one had been injured when a man threw a bomb in the station of Sondrio, in the northern region of Lombardy. "The incident at the Sondrio station caused a small damage to the train and (the authorities) still don't know the motive for the act," said a statement from the authorities. Trenitalia had suspended service at the stations of Milan and Treviso in the area around Venice following the latest incident. The service has now resumed but is subject to delays. Discuss anything and everything related to the Transformers Live Action Films franchise, which are directed by Michael Bay. Transformers 3 is scheduled to be released on July 1st, 2011. Check out our Live Action Film section here. Transformers 3 : The Dark of the Moon actually suprised me, I knew that it was the third movie but I was really freaking out because it was completely different from the first 2. The world was bigger and more reality like; I really liked the way they fixed the bot-robot relationship, they actually are friends and not enemies. Also there are real robots on earth now and that gives them more character, they can help humans to solve things. I also think that dinobot helps the transformers to solve the mystery of stalker, he is the main character of the movie, the catalyst; The villains look more deformed and alien now and the battle looks more realistic. I also love the new sound of the machines. The sound of their weapons is really powerful. Any updates on what bots are in this film? I'd really like to see a Dinobot and may the stars align and I also think that a spider-bot would be a good idea. Click to expand... I would like to see. Click to expand... Anything that comes out in the next release would be great if it is Dinobot. Hey. If you're asking about the video game
