WhatsApp has been downloaded by hundreds of millions of users worldwide. Here's what makes it stand out from its competition: WhatsApp Messenger has a lot of other functions aside from simple text chat. It lets you send and receive files, links, and voice notes, too. It can also function as a camera shutter button and as a music player. But, the key feature of WhatsApp is its text chat. It has the largest database of messenger users in the world. This means you will never have to worry about people on the other end of the line. The only reason you will not be able to send a message is if you do not have a data connection. The voice chat also features high-quality recording of both sides of the conversation. If you can't record, the app will automatically record the person you're talking to. You can also add a filter, if you'd like, so that people only hear what you want them to. Another cool feature in WhatsApp is the usage of stickers. These are small images that can be used instead of words. They can be saved to your phone's memory, and you can even use them in different languages. WhatsApp also lets you make calls through the app, as well as set up a group chat. There are also direct messages, which can be sent through any of the group chats. One more thing to note is that, if you're on a GSM network, you can send free SMS messages. These will only go to people who have the app installed on their phone. WhatsApp Messenger has an advertising-free model. This means you can use the app without being bombarded with ads. A must-have for people who text a lot At the end of the day, WhatsApp Messenger is a messaging app. This means that, at its core, it is designed to help you communicate with people, either through voice or text. This is one of the main reasons why this app is so popular. This app also comes with a number of features that can make you really love using it. For instance, it lets you send and receive files,
