[Reynoso] Ramas y Laguna, 1574-1635), en su obra, Anales del.Arthroscopic surgery has become  
the "gold standard" in the treatment of disorders of the glenohumeral (shoulder) joint. This  
procedure has become so successful because it allows the shoulder joint to remain free of scar  
tissue and allows the shoulder to be properly exercised during the healing process. In a typical  
arthroscopic procedure, the body of a shoulder joint is cleaned of fluids and then examined with an  
arthroscope, a small flexible, fiber optic viewing instrument, inserted through a small incision, or  
portal, in the skin at the surgical site. A camera is attached to the arthroscope to allow a surgeon to  
view the site. Other surgical instruments can be inserted into the body of the patient through other  
portals in the skin at the surgical site. These other surgical instruments are used to perform the  
surgical procedure. Some surgical procedures are performed on the shoulder by making a large  
incision and cutting or scraping cartilage in the joint and then tightening muscles to reshape the  
bones and allow the shoulder to move freely. This procedure is referred to as open surgery. This  
procedure is difficult, painful
