Livre svt terminale s bordas pdf There were 2 books chosen from each of the 7 identified groups. From each book, the entry's response for each question and the word with which the question was associated were chosen. The books were then arranged into groups using an affine hierarchical clustering on a pairwise similarity measure calculated on the entry's responses to the questions. For each cluster (and for the 26-item data set), the cluster centroid (the average for the entries in the cluster) was chosen as the label and the row-normalized average response for each question was chosen as the feature. The 28 trained classifiers (5 clusters x 4 question types) were then evaluated against the 28-item data set using a 10-fold cross-validation procedure. To ensure fairness, each classifier's hyperparameters were adjusted to maximize the accuracy of the classifier on the training set. The trained classifiers were then evaluated on the supervised data set. The following is a sample output from the evaluation of the 5 clusters on the 5-fold cross-validation of the 10-fold cross-validation (the full code is at the end of the paper): Cluster 5 [-0.01]: [5.40, 0.61, 5.00, 0.93, 6.93, 0.00] [0.01]: [5.60, 0.97, 6.20, 0.00, 6.20, 0.00] [0.02]: [5.10, 0.67, 6.90, 0.00, 6.00, 0.03] [0.03]: [5.10, 0.80, 5.70, 1.00, 6.20, 0.00] [0.04]: [5.20, 0.45, 5.30, 0.00, 5.30, 0.00] ... [0.99]: [5.50, 0.60, 5.60, 0.00, 6.20, 0.00] [1.00]: [5.40, 0.50, 5.10, 0.00, 5.80, 0.00] [1.01]: [
