Free online image-editing programs While Photoshop is normally only an option for those who are already self-taught in image editing, many people find online image-editing programs easier to use and less intimidating than the traditional Photoshop interface. The Adobe site ([www.adobe.com](http://www.adobe.com)) offers a wide variety of free online photo editing, including some Adobe products that are only accessible online, such as the graphics-editing program Adobe Photoshop CS5 Extended Online, and Adobe Photoshop Elements 6. Some of the better online image-editing programs, such as those offered by Nik Software at [www.niksoftware.com](http://www.niksoftware.com), contain features similar to those of Photoshop. They do offer a limited ability to edit RAW images and reduce excessive image noise. Adobe also offers its free online editing program called Adobe Photoshop Elements, intended to be used by novice and non-computer users. Elements is a stripped-down version of Photoshop that's designed as a very easy-to-use photo editor that offers basic image adjustments, such as crop, rotate, and transform. It's primarily designed to be used by non-computer users, but it does offer the ability to import and modify RAW images and JPEGs. ## Free RAW/DNG Conversion Software When you get a camera that can capture only RAW images, you need to use

[Role of musculoskeletal ultrasonography in the assessment of the locomotion ability in patients with sequelae of cerebrovascular insufficiency]. The aim of the study was to assess the influence of acquired locomotion hemiparesis on patient's perception of ability in walking. Ultrasonographic examination was performed on a group of 104 patients (37 women and 67 men) aged 37-78 (mean 58 +/- 0.8 years). The following parameters were assessed: muscle-tendon length of the quadriceps femoris, gastrocnemius muscles and hamstrings tendons, joint space of hip and knee joints. The follow-up period varied from 1.5 to 48 months. The principal criterion for assessment of locomotion ability was patient's self-assessment using Medical Research Council grades. Research results showed that patient's perception of ability in walking differs from the objective parameters of locomotion. It is concluded that in the course of locomotion hemiparesis assessment of musculoskeletal parameters seems to be helpful.

Q: How can I draw a circle with a specific radius using `drawCircle` in this example In "calculus with matrices and vectors", there is an example in chapter 1.2 and it is easy to understand. I just don't understand what is the difference between " " and", and the difference between "quoted radius" and "real radius" It is in part A of this example. A: The

---

"quoted radius" is the radius used when the dashed circle is drawn, and the 'real radius' is the radius of the solid circle. When the book says that the "quoted radius is the same as the real radius", that means that the dashed and solid circles have the same radius. That's not the case in this example. Q: GET request response disappears from website This is probably a silly question but I am confused. I am trying to pull weather data from OpenWeatherMap. The API call returns an error (incorrect number of values for 'days') and the website that calls the API (this website) disappears from the screen and all you can see is the site with a message "Some of the API requests may take 5-20 seconds to return a result. Please try again later or wait a bit." The screen looks normal for a few seconds and then disappears. The login for OpenWeatherMap is usually

of own characteristics, the patients had high ADR rates (41.5% to 75.4%). They suggested that the rate of ADRs would be increased if the patients were given combination treatment with a potassium-sparing diuretic, because there would be a negative interaction between the potassium-sparing diuretic and a conventional antihypertensive drug. In the current study, however, no ADR was reported in the patients who had not taken diuretics. The cause of this discrepancy is not clear, but it

---

may be partly related to the difference in the total number of concurrent antihypertensive drugs administered. In the current study, the patients were prescribed a total of 5.1 antihypertensive drugs on average, whereas the patients in the study reported by Friedman et al. were prescribed a total of 3.6 antihypertensive drugs. As the study population in our study included elderly patients with severe hypertension, we also administered antihypertensive drugs to them, including diuretics. When a total of 5 antihypertensive drugs were administered to an elderly patient, the risk of ADRs may be increased, and this may have affected the ADR rate. To clarify whether or not a combination of the potassium-sparing diuretic with a conventional antihypertensive drug is really associated with a risk of ADRs, further studies of single treatments with each antihypertensive drug are needed. Among the antihypertensive drugs commonly used in Japan, only prazosin can be administered orally. In our study, the mean time to take the first oral antihypertensive drug was 10.0 days (range, 1--18 days). The time needed to take the first antihypertensive drug is considered to be related to patients' conditions and physician's will. In the current study, the reasons for discontinuing oral antihypertensive drugs (non-adherence) were reported in 5 patients. The median time from discontinuing drugs to initiating the thiazide-type antihypertensive drug in the non-adherence patients was 1 day (range, 0--22 days).

---

The earlier the medication is started, the more likely it is that non-adherence of the patient is the cause of the discontinuation. In other words, if the patient can be treated with the antihypertensive drug as soon as the patient's condition improves, it is more likely that the patient will adhere
